DIGITAL EQUIP CORP

APPL-NO: JP10058065
APPL-DATE: March 10, 1998

INT-CL (IPC): G06 F 11/34; G06 F 15/16

ABSTRACT:

PROBLEM TO BE SOLVED: To provide a device that collects performance data of a
computer system which is equipped with plural processors that simultaneously carry
out a program instruction.

SOLUTION: Plural performance counters are connected to each processor. The
performance counters store performance data, which are generated by each processor
when an instruction is carried out. Interrupt handlers 231 and 232 that are
executed in each processor respond to an interrupt and sample the performance data
of a processor. The 1st memory includes a hash table that is related to each
interrupt handler 231 and 232, and the hash table stores the performance data that
is sampled by the handlers 231 and 232. The 2nd memory includes an overflow buffer
238 which stores performance data while a part of the hash table is active or full.
The 3rd memory includes a user buffer 262 and is provided with a means that
periodically flashes performance data from the hash table and the buffer 238 to the
buffer 262.

APPL-DATE: March 10, 1998

INT-CL (IPC): G06 F 11/34

ABSTRACT:

PROBLEM TO BE SOLVED: To provide a computerized method for analyzing performance
data collected while a computer system executes the instruction of a program.

SOLUTION: Performance data is collected while the program is executed. Performance
data contains the sample count of executed instructions. The program is analyzed
and the classes of the instructions are decided. The instructions of the equivalent
class are executed for the same number of times. The execution frequency of the
respective instructions of the respective equivalent classes is estimated. The
number of the average cycles required for generating the respective instructions of
the respective equivalent classes is obtained by using estimated execution
frequency. The number of the average cycles is compared with the number of minimum
cycles and the number of the dynamic stall cycles is decided. Furthermore, the
reason of the dynamic stall cycles is inferred to.
